Shingijutsu Co., Ltd. is a group of consultants who can promote new production technology. Foundation of the Company and the Shingijutsu Way of Consulting

Shingijutsu Co. was founded by Yoshiki Iwata, Chihiro Nakao and Akira Takenaka in 1987, who had worked for top-level manufacturing companies for many years. They were involved in production method KAIZEN and contributed to the improvement of the total performance of their companies throughout their entire career. They were determined to the know-how they developed to contribute to other companies as well as the society.

Ever since the foundation of the company, they have consulted only with the companies where they saw that top management had a strong commitment to lead the production system.

"Manufacturing Method KAIZEN" is an endless process. Our consultants continue to take up the challenge of accumulating KAIZEN know-how and carrying out new technology research and development.

There are an increasing number of companies who request our consulting learning from the top management we worked with because of the significant effects on their performance. The information has spread to the overseas, and in recent years we have received offers from companies of the United States and the EU such as Germany. This is because of tremendous results and economical benefits of our consulting.

Apart from our regular consulting practices, we organize 4-day "Shopfloor KAIZEN Seminars" to foster the skills to serve as internal consultants. The seminars have attracted a large number of participants from Japan as well as overseas. Many of the participants are now contributing to their own companies using the skills they acquired through the seminars.

The seminars are designed to train the participants to acquire the following three skills.

1. Skill to use their own wisdom and creativity instead of paying money to KAIZEN.
2. Skill to KAIZEN based on the 3 Gem (Gemba:Shopfloor, Gembutsu:Actual products, Gemjitsu:Facts) principles.
3. Skill to create a system to make KAIZEN possible.
